INSTITUTIONAL-GRADE TRADE ALERTS: FUTURES, FOREX & INDICES

# Welcome!

Thank you for taking a deeper look at the 11 Year Trade Report for fractalerts.

In 2006, I built this system based on math and physics to crack NSA level codes.

Today, it's used to identify trades for some of the world's biggest banks, hedge funds and institutional money managers.

Right now, over \$1.1 Billion is being traded with this system.

Trading just one contract per alert has generated over \$1.7 million since 2007 across futures, forex and indices.

Here's the key: It's based on math and removes the emotion from trading.

Earnings reports? *I don't care...*  
Political tension? *I'm just not interested...*

Why? **MATH** doesn't care about these things.

We're excited to share the results our clients have enjoyed over the last 10 years.

We invite you to join us when you're ready to take the emotion out of trading and generate reliable results.

**Rich Clifford**  
Founder and Managing Director  
fractalerts, SA

## Contents

### Part 1

**Trade Results:** Zero bull. Every market. Every ruby red cent. Going back 11 years.

### Part 2

**Report Details:** Month by month, year-by-year, market by market.

### Part 3

**Sample Alerts:** Exactly what our clients can expect, and examples of what they receive.

First... a few stats.

# \$1.1 BILLION

Currently being traded with fractalerts by the world's biggest banks, hedge funds and money managers.

# \$15,212

Average yearly profit generated across the S&P, Nasdaq, Dow and Russell – trading just one contract per alert.

# \$129K

Amount your account would be worth, had you started with \$10,000 in your account trading the S&P alerts alone.

During that same period, the S&P increased by 100%, so your account would have grown to about \$20K, with a massive drawdown in 2008. With fractalerts, your unleveraged average return would have been 27.86% per year.

# How the alerts work.

fractalerts identifies market patterns with a proprietary mathematical program that factors price, volume, momentum and elapsed time.

Our approach is systematic, unemotional and exact.

When new patterns are identified, we email our customers exactly what trades we will place and why. (See sample alert on page 13)

It's because of our extreme confidence and lengthy track record of success... that we are able to be the only service that tells you what we will do, not just what we have done.

## ENTRY to EXIT

fractalerts identifies the trade and notifies you 12-24 hours in advance of both the entry and exit. You simply select the alert you want to execute and trade as you see fit.

# Why use alerts?

- **STOP** being a slave to market conditions...
- **STOP** pouring over charts...
- **LET GO** of the anxiety that ruins so many traders and investors...

## The TRUTH About Fractals

**You may have heard of fractals in financial media.**

In fact, the word "fractal" has become something of a buzzword in recent years.

Unfortunately, 99% of what is described a "fractal"... isn't.

You see, "fractal analysis" is a made-up term by some technical traders who "think" they are looking at fractals.

In reality they're just looking at a series of bar charts that may look similar at one point... but never repeat.

**Here's what they are missing...** Financial markets follow infinitely repeating patterns.

Infinitely repeating patterns.

But within sets of data as large as financial markets it's impossible for a human to visually observe one.

The amount of data you'd need to absorb would dramatically exceed your capability.

So of course these "fractal analysts" don't make real money with their methods.

They don't even know what a real fractal is, much less what to do with it.

**But we do...**

fractalerts®

PART 3: ALERT DETAILS

## Using the Alerts

You don't have to be a big bank to do this...  
You don't have to be a hedge fund either...

All you need is....

# 5 Minutes

If you spend more than 5 minutes a week trading the alerts – you're doing something wrong.

The market can go in...

# Any Direction

Stop worrying about market direction. The alerts help you generate a profit in up, down and sideways markets.

You can STOP the...

# 2nd Guessing

Get rid of the doubts and anxiety that goes with trying to spot a trade, make an entry and manage an exit.

PART 3: ALERT DETAILS

# What to Expect

# EMAIL ALERTS

Is sent for each market category containing the trade alerts and supporting commentary.

# 12-24 HOURS

ADVANCE NOTICE provided on each trade alert.

# 270 ALERTS

Average number of alerts to expect each year.

The following alert was emailed to subscribers on 2017/09/28 at 3:07 PM EST

## Indices

### A new fractalert is out for: S&P, Nasdaq, Dow and Russell

Tomorrow we will be closing the following position(s) and placing the following trade(s):

#### Trades

**CLOSING:** Short Nasdaq (QQQ and NQ) from 142.44 and 5843.75 (Sep)

**OPENING:** Long Nasdaq (QQQ and NQ)

@ 11:00 AM EST on 2017/09/29

**CLOSING:** Short S&P 500 (SPY and ES) from 244.69 and 2444.00 (Sept)

**OPENING:** Long S&P (SPY and ES)

@ 11:00 AM EST on 2017/09/29

**CLOSING:** Short Dow (DIA and YM) from 218.14 and 21815 (Sept)

**OPENING:** Long Dow (DIA and YM)

@ 11:00 AM EST on 2017/09/29

**CLOSING:** Short Russell (IWM and TF) from 136.61 and 1373.80 (Sept)

**OPENING:** Long Russell (IWM and TF)

@ 11:00 AM EST on 2017/09/29

As a matter of courtesy we often add market data and technical analysis to our alerts. We want to make clear however that we don't intend to suggest that there is a causal relationship between the two. The alerts follow their own path irrespective of market data or technical analysis.

## Notes

Equity markets continue to drift higher with only fleeting signs of selling. For almost a year now, we have seen small waves higher followed by either big 1 day down moves and nothing more or slight drifting to the downside... only to have the markets push higher once again. Only Russell has been anywhere close to the 200 SMA over the last year and after yesterday's move, that seems to be completely irrelevant.

The US dollar is getting a boost from speculation on a December rate hike (which seems almost certain now). And equities are still clinging to some hope that there will be major tax reform this year. Much of what we are reading though shows that tax reform is baked into the current price. If a plan fails to materialize over the next month or so, we could see a real short term top be put in.

The major focus seems to be on the corporate tax rate. "The proposal to slash the corporate tax rate from 35% to 20% is probably less ambitious than previously thought, but given the fact that markets were recently underestimating the likelihood of significant tax cuts after failing to repeal Obamacare, there's still more room for U.S. stocks to move to the upside. Meanwhile, the dollar may see further short-term gains on expectations that U.S. companies will repatriate profits from overseas."

We will be in these positions until October 30th. Given the length of this pattern, we will send a mid pattern alert and always update if anything changes.

## Charts

### Nasdaq

The NASDAQ 100 broke above the 5900 level again, and that of course is a bullish sign. In fact, we have wiped out the massive selloff from a couple of sessions ago, and now look ready to go much higher. Many traders believe that buying pullbacks will be the way going forward, and that the 5900 level now should offer a significant amount of support. Longer-term, many believe that we target the 6000 level again, which has been massively resistive.

#### Support Resistance

5891	5999
5847	6062
5784	6106

### S&P 500

The main trend is up according to the daily swing chart. The trend changed to up just two days after it changed to down. This is a highly unusual whip-saw pattern that is seldom seen in the stock indices. It could be an indication

of investor indecision or thin trading conditions. Typically, this type of move is news driven. A trade through 2509.25 will signal a resumption of the uptrend. A move through 2485.00 will change the main trend to down once again. The short-term range is 2485.00 to 2509.25. Its 50% level or pivot is 2497.00. This price is essentially controlling the near-term direction of the market. The main range is 2419.25 to 2509.25. Its retracement zone is 2464.25 to 2453.50.

**Support Resistance**

2491	2507
2484	2514
2476	2522

**Dow Jones**

The Dow Jones 30 had a choppy session on Wednesday, as we continue to dance around the 22,300 level. Many traders think that the market is trying to find a base here though, and it's only a matter of time before we break out to the upside. Once we do, the market should then go to the 22,400 level.

**Support Resistance**

22218	22384
22137	22469
22052	22550

## Russell 2000

## **CFTC Rule 4.41 Disclaimers**

Futures and options trading has large potential rewards, but also large potential risk. You must be aware of the risks and be willing to accept them in order to invest in the futures and options markets. Don't trade with money you can't afford to lose. This website is neither a solicitation nor an offer to Buy/Sell futures or options. No representation is being made that any account will or is likely to achieve profits or losses similar to those discussed on this website. The past performance of any trading system or methodology is not necessarily indicative of future results. Results are based on simulated or hypothetical performance results that have certain inherent limitations. Unlike the results shown in an actual performance record, these results do not represent actual trading. Also, because these trades have not actually been executed, these results may have under- or over-compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated or hypothetical trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profits or losses similar to these being shown. Any specific investment or trading service contained or referred to on our website(s) may not be suitable for all traders or investors. You should not rely on any of the information as a substitute for the exercise of your own skill and judgment. In instances where qualitative judgments are issued, the opinions expressed are that of the author, and may not necessarily reflect those of Fractal/fractalerts Management, their respective subsidiaries, affiliates, officers or employees. You are urged to draw your own conclusions from the data and analysis presented here and elsewhere. We recommend our potential customers to visit the Commodity Futures Trading Commission ("CFTC") website at the following address before trading: [cftc.gov/cftc/cftcbeforetrade](http://cftc.gov/cftc/cftcbeforetrade) Regarding Testimonials: 1) Testimonials may not be representative of the experience of others. 2) Testimonials are not necessarily indicative of future performance or success. 3) No compensation is ever paid in exchange for any testimonials.
